... Artificial light, nighttime & starry sky ...

Then as now, artificial light attracts attention and suggests both prosperity and progress. It makes work and leisure activities available around the clock. But where there is light, there is also shadow. Permanently increasing nighttime lighting not only changes the day-night rhythm of people, but also has an impact on the living conditions of countless animals and plants. While the natural nighttime landscape captivates with the interplay of dark landscape and an overwhelming starry sky, artificial light bars from cities make the landscape fade. Stefanie Suchy talks about the dark side of light and lists options for using artificial light in a responsible way.

CATEGORY	Lecture
LOCATION	Vent, primary school Vent - Hotel Similaun; Vent, village entrance
WHEN	8.30 pm
DURATION	approx. 1 h
FEE	free of charge on occasion of ARTEVENT
LECTURER	Mag. Stefanie SUCHY, biologist
